SCALE MODEL TECHNOLOGIES

D'Korva

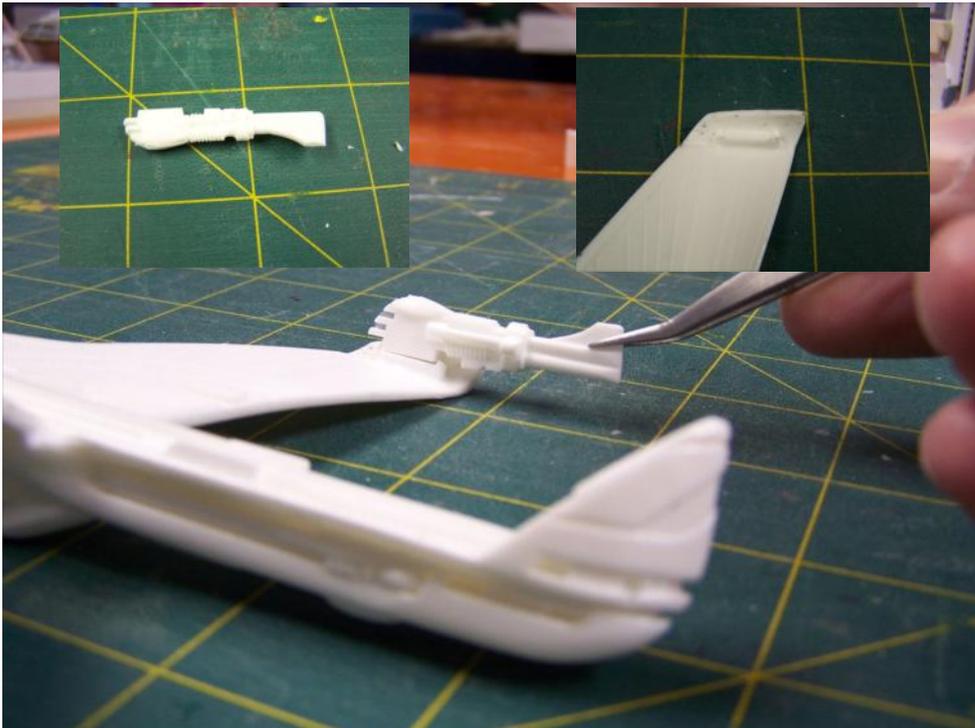

Parts List:

You should have 4 parts. Two laser guns, 1 under chin extension and the main body.

Step 1.

This step is completed two times (2x). Locate parts 'A' and 'B' and 'D'. One laser cannon is located on each side of the underwing. The laser cannon will simply cement in place between the stub under the wing and the wing edge.

Step 2.

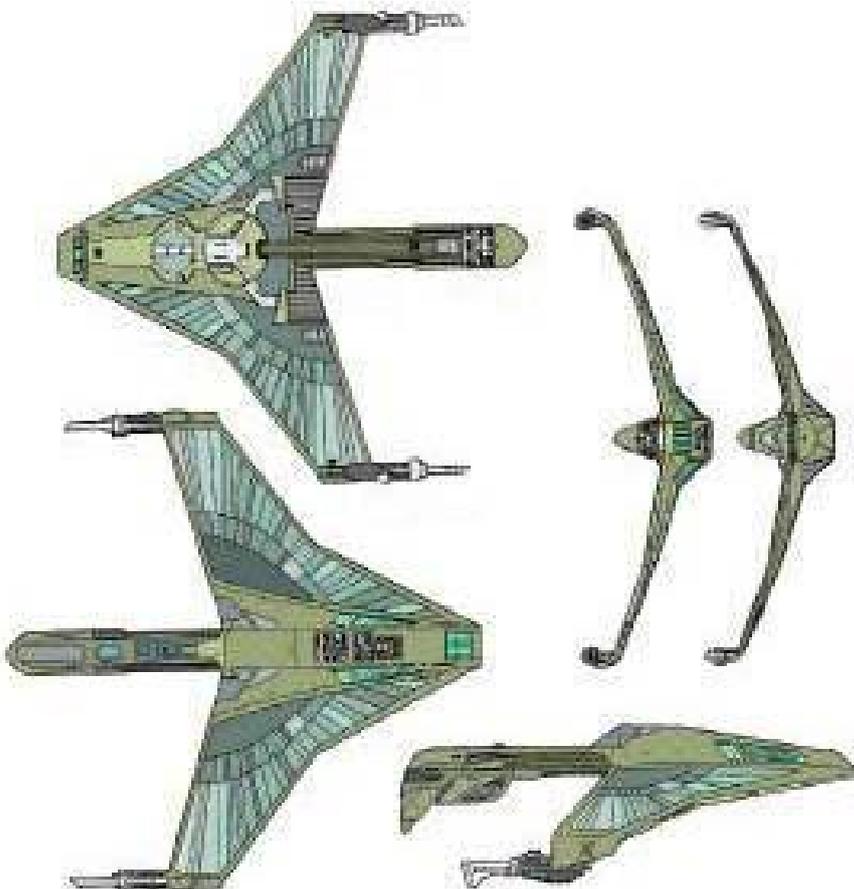

Locate part 'C' and 'D' which should now have the laser cannons cemented in place. Part 'C' is cemented to the underside of the Osprey head, pay attention to the orientation. The flat angle goes to the back of the head (see photo).

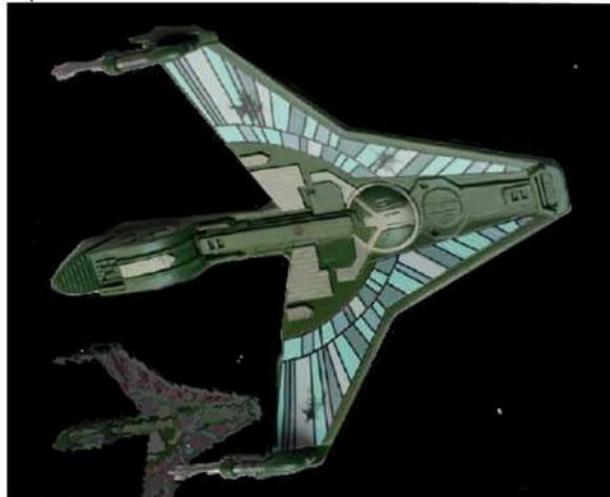

Painting.

There is no set paint scheme for the model. So use your imagination and make it your own.

Here is how the designer of the kit envisioned his!

Elements of the 41st and 127th Florillas, 18th Legion, conduct precautionary sweeps near the Galorndon Core. Markings indicate that this action occurred after the first Battle of Chin Toka.

D'Korva Class Long-Range Scout

The D'Korva class entered service in the early 2360's. It was a refinement of the Bre'el class design which had been introduced into Klingon service over eighty years earlier. The new Romulan starship was similarly configured for reconnaissance, special operations and internal pacification roles. Unlike contemporary Romulan ships, the D'Korva was powered by a conventional matter/anti-matter powerplant.

The D'Korva (or Osprey, as it was code-named by Starfleet) was rarely seen prior to the Dominion War; confrontations with the Federation and Klingons were left to the massive D'Deridex class Warbirds. The D'Korva's most notorious achievement was its use as a special ops platform for the hijacking of the U.S.S. Prometheus.

Though well-suited for their intended role, the D'Korvas were subjected to brutally hard use during the Dominion War. As the only Romulan class which could be quickly adapted to withstand the Breen energy-dampening weapon, they comprised the only front-line units of the Romulan Star Navy for several months.

When the armistice was finally declared, only 56% of the Osprey fleet remained. Almost all of the remaining units were damaged; over 20% of the survivors were salvaged for useful parts. An upgraded form of the class remains in limited production today.
